Arctic Multidomain Legal Course:
Legal, Operational, and Strategic Considerations for Practitioners

Introduction:

The Arctic is undergoing tremendous transformation. Whether driven by climate change, global economic competition, or geopolitics, current and emerging challenges require Arctic practitioners and security professionals to have an understanding of the legal mechanisms governing this region in order to adequately prepare for and meet these challenges.

This course will be offered four times during FY2024. It will examine the most relevant Arctic legal frameworks, instruments, and concepts across multiple domains. It will situate the discussion in the context of current challenges and events.

Learning Objectives:

•Develop a basic understanding of the legal frameworks, instruments, and concepts related to the Arctic in relevant domains

•Equip participants with analytical tools to identify, assess, and understand Arctic legal issues as related to current challenges

•Identify emerging legal issues for further inquiry and analysis

Audience and Logistics:

This course is intended for Arctic practitioners and security professionals (civilians, attorneys, or military leadership) in the United States and Allied countries whose positions require them to have greater understanding of Arctic legal frameworks, instruments, and concepts.

This 19.5-hour course will be taught virtually using synchronous and asynchronous learning methods. Students will engage in legal exercises in an assigned breakout group. Pre-read materials will be distributed approximately one-week prior for review.

FY 2024 Course Dates:

12-14 December 2023
30 January - 1 February 2024
7-9 May 2024
13-15 August 2024
